

Melitta® c35

The fast and precise
fully automatic coffee machine
for fresh milk coffee specialities.

Melitta SystemService

Speed and Precision

Performance

The Melitta® c35 enables you to serve customer-specific coffee/milk variations – from espresso to coffee crème and latte macchiato, or even a decaffeinated cappuccino.

With a performance of up to 200 cups per hour, the Melitta® c35 ensures that orders are served quickly and efficiently, even during peak periods.

A powerful and highly precise grinder with ground stainless steel disks guarantees a perfect grind and a long service life (up to 80,000 grindings).

This high-grade technology ensures consistently high coffee quality.

The add-on module for chocolate specialities

The new top-performing chocolate module is available as an optional extra for the preparation of the finest chocolate specialities.

Fitting perfectly in the machine it extends the range of beverages available to include all powder-based varieties and prepares the finest chocolate specialities mainly made up of milk. Not only your youngest guests will be pleased.

With a width of just 15 cm, the module fits perfectly onto your milk cooler and is optimally tailored to the c35 from a design perspective.

Modern touch-screen color display

The Melitta® c35 boasts a modern, fresh design with touch-screen color display.

The new color display of the Melitta® c35 can be configured according to individual customer wishes. Up to 10 products can be displayed simultaneously on each screen page.

Customized background images allow specific customer information, e.g. in self-service mode, and make the Melitta® c35 an ideal sales promotion partner.

With its innovative display and animation concept, the Melitta® c35 is particularly well suited to self-service operation.

Less is more...

Easy to operate

Thanks to its clear and simple operation, the Melitta® c35 is your ideal partner for self-service operation.

The display shows users the current operating status and guides them through the necessary steps.

Cleaning

CIP - Clean in Place: the world's easiest milk cleaning system and hygiene program – and of course HACCP approved.

Components can be cleaned without being removed.

The milk system is automatically cleaned with a steam jet after each product is served.

Height-adjustable outlet

The overall high quality of the machine can be seen in even the tiniest details.

The combined outlet for coffee and coffee specialities is made from top-quality stainless steel and can be freely adjusted to any height. A stable catch ensures a firm – yet always adjustable – height setting.

Coffee quality

Each coffee/milk speciality can be programmed to reflect individual customer preferences and each coffee blend can be adapted to perfection.

Coffee powder metering can be infinitely adjusted to up to 18 g to satisfy all tastes.

Even after a lengthy period of inactivity, the automatic temperature control system ensures that the dispensing temperature remains at the perfect specified level.

Chip cards

The simple chip card system makes the machine easy to operate and regulates access for staff, managers and service technicians.

Milk cooler

As an optimum addition to the slim Melitta® c35, the range also includes an equally slim milk cooler – just 15 cm wide.

The entire coffee/milk combination has a footprint of just 50 cm.

15 cm + 35 cm = 50 cm

Removable bean containers

One or two transparent and easily refillable bean containers – each holding up to 1.3 kg – for one or two different coffee blends (e.g. schümli and espresso).

The bean containers can be easily detached, making them quick and simple to clean – even in the dishwasher.

Less means more space

The Melitta® c35 combines cutting-edge technology and simple handling with the smallest possible footprint.

Individually create your desired model with the add-on modules of your choice to enjoy the greatest possible performance efficiency in the smallest space.

Melitta® c35

Operation

Depending on the setting, over 100 different products can be easily selected via the touch-screen.

Color display

Large, individually programmable touch-screen TFT color display.

Chip card system

The simple chip card system makes the machine easy to operate and regulates access for staff, managers and service technicians.

Automatic Coffeequality System (ACS)

Any variation in the grind quality, powder quantity, piston pressure, water temperature or brewing time is monitored and automatically corrected.

Variable Pressure System (VPS)

To ensure optimum coffee quality, the contact pressure can be individually adjusted for each coffee speciality up to a maximum of 1500 newton.

Milk cooler

The 15 cm wide add-on module can store up to 4 litres of cooled milk and features a level monitoring and empty status detection system.

Clean in Place (CIP)

Fully automatic cleaning of all milk pipes for maximum cleanliness according to the HACCP standard.
